

The server is configured using the following:

- Ubuntu Server 18.04.02 (LTS)
 - **IPv4:**
 - 10.5.0.30
 - 255.255.0.0
 - 10.5.0.2
 - 8.8.8.8
 - **Server Name:** priserver
 - **Username:** prinet
 - **Password:** Pri7680
 - **Installed:**
 - OpenSSH Server
- Unraid VM Server
 - **Name:** PriServer
 - **Logical CPUs:** cpu 0, cpu10
 - **Memory:** 1024MB
 - **Primary vDisk Size:** 100G
 - **Graphics:** VNC
 - **VNC Password:** Pri7680

Post install operations:

- Sudo apt-get update
- Sudo apt-get upgrade
- Sudo apt-get install apache2
- Sudo apt-get install mysql-server
- Sudo mysql_secure_installation
 - No to Validate Password Plugin
 - Password: Pri7680
 - Remove anonymous users
 - Allow root login remotely
 - Remove test database
 - Reload privilege tables
